

Protect your identity with ScanSafe®

RFID shielding in sleeves and envelopes
Simple protection against identity theft

Protect data held on RFID tags in: passports • driving licences • store and credit cards • identity tags • access controls • electronic toll collection • contactless payments

With a small portable scanner, identity thieves can read the RFID (radio frequency identification) tags in passports, credit cards, and other personal documents. The theft is swift and silent; the victim knows nothing.

But now you can protect yourself or your customers with ScanSafe® envelopes and security sleeves. They block 99.99%* of the radio waves from fraudsters' scanners.

ScanSafe® – tear resistant, water resistant, 99.99% radio wave proof**
The ultra-protective three layer construction of ScanSafe® keeps documents secure. The outer layer is made from DuPont™ Tyvek®, the

middle layer is aluminium foil; the inner is paper. The combination makes ScanSafe®:

- tear resistant
- water resistant
- printable
- burst resistant
- 99.99% radio wave proof**

ScanSafe® envelopes – for business applications that demand radio-frequency security, such as credit cards or other RFID tagged documentation.

ScanSafe® security sleeves – in two sizes: one for passports, one for credit cards.

RFID shielding in an envelope - simple protection against identity theft

ScanSafe® RFID shielding from Bong

A new weapon in the fight against crime

Security mailings

Banks, government agencies, and other security conscious organisations now have an extra weapon in the fight against fraud and identity theft. Prove to your customers that you're serious about security by mailing or storing your RFID tagged documents in ScanSafe® envelopes.

Personal security

Most people don't know how vulnerable their RFID tagged documents are. You can help by providing them with ScanSafe® security sleeves branded with your company logo. It's an easy way to win their trust and respect.
